Name:	Run Hibernate Example
Summary:	Exhibit the implementation of Hibernate
Version:	1.0
Preconditions:	MySQL Server must be running
Triggers:	Choosing 'H' at the main menu
Main Success Scenario:	System displays output as functions interact with MySQL database
Alternative Success Scenario:	If server is down, the application will alert the user to the failed connection
Postconditions:	No changes will have been made to the RDBMS
Business Rules:	Hibernate is used to affect a MySQL database through a Java application
Notes:	A .sql file is provided for testing, but the specific username and passwords may need to be altered when implemented in a different database
